

# *The perfect stud!*

**Use our Tester Kit to ensure your stud threads are safe!**

*The WHEEL TESTER KIT is designed to be used in conjunction with the normal practise of Workshop Safety*

**Fine thread template tools**

18mm, 20mm and 22mm

**Course thread tool**

Suitable for Scania Trucks

**Wheel Hole Tower**

21mm, 24mm and 26mm stud holes

The WHEEL TESTER KIT will allow and provide a means of checking the degree of stud thread stretch.

Normally the degree of stud thread stretch is associated with the use of excessive air gun and/or brace and extra bar use.

A new stud will have the correct thread pitch. Due to a high degree of excessive torque levels the thread pitch will eventually stretch. The thread tester is manufactured with a precise thread pitch.

**Use our tester to ensure your stud threads are safe!**
